

GOLDEN DELICIOUS

The Golden is a good size apple, with an average weight of 170-190 grams and an elongated cone shape. It's yellow coloured in proximity of the collection and it is extremely suited for a long storage. The shape of the fruit is particularly influenced by the cultivation background. An hilly ambient favors the formation of natural giberelline that result in a significant lengthening of the vertical axis, also making the pit calcina average deeper. The epidermis (skin) is smooth or slightly rusty, yellow-green or bright yellow coloured, with visible and well distribute lenticels.

In the presence of temperature drops and high relative humidity in the period before ripening, this apple tends to have a pink blush, the so-called "facet". The pulp is cream color and it is firm and crisp, juicy, slightly tart, very aromatic and with good sugar and sourness content.
